

DIAGNOSTICS

Sound familiar?

CHECK EVERY ONE THAT APPLIES TO YOUR BUSINESS

Data security & AI governance

- ☐ Do you know what your team is pasting into public AI tools, and who approved it?

Manual workflows

- ☐ How many hours a week disappear into copying data between systems by hand?

Knowledge loss

- ☐ When someone leaves or changes roles, what walks out the door with them?

Slow sales cycles

- ☐ How long does a quote, proposal, or follow-up sit before it reaches the customer?

Support overload

- ☐ Is your team answering the same handful of questions over and over again?

Data paralysis

- ☐ You already have the dashboards. Are they actually changing any decisions?

Bring this to your call. Whatever you checked is where we start.

FELICAN AI

10 ways AI can benefit your business

01 Turn More Leads Into Customers

Respond to leads instantly, qualify prospects, and schedule appointments automatically.

02 Serve Customers 24/7

Answer questions, resolve common issues, and capture opportunities whenever customers need help.

03 Help Employees Find Answers Instantly

Give authorized employees secure access to company procedures, policies, products, and internal knowledge.

04 Eliminate Repetitive Work

Automate tasks across email, CRM, accounting, scheduling, inventory, and other systems.

05 Find and Fix Operational Inefficiencies

Discover bottlenecks, duplicated work, unnecessary costs, and missed revenue opportunities.

06 Process Documents and Data Automatically

Extract and organize information from invoices, contracts, forms, receipts, and PDFs.

07 Increase Revenue From Existing Customers

Recommend relevant products and services to each customer at the right time.

08 Improve Cash Flow and Protect Profits

Follow up on unpaid invoices and uncover waste, billing errors, excessive discounts, and hidden profit leaks.

09 Make Faster, Better Business Decisions

Give leadership a clear view of performance, risks, opportunities, and recommended next actions.

10 Protect Sensitive Business and Customer Data

Build AI around privacy, encryption, access controls, secure data handling, and the company's compliance requirements.

VERIFIED CREDENTIALS

SERVICES

AI that fits the business

01

AI agents and bots

Answering customers, qualifying leads, and routing requests — escalating to a person when they should.

02

Business automation

We map the steps your team repeats by hand every week, and remove them.

03

Custom integrations

AI connected to your real data: CRM, phone, scheduling, billing, and back office.

04

Private AI systems

For data that cannot leave. Runs inside your environment, under your access controls.

05

AI implementation and consulting

A clear plan for what to build, in what order, and what to skip.

06

Business solutions

A complete build aimed at one operational problem, handed over working.

07

AI training and workshops

Practical sessions for leadership and staff, so adoption does not stall after launch.

PROCESS

From first assessment to ongoing value

01 Assess

We review current AI use, workflows, and where friction is costing you.

02 Implement

We build and deploy against the friction you named, in priority order.

03 Manage

Governance, monitoring, and maintenance keep it working as you change.

Private and responsible by design. Human intervention remains available. Authorized Auto AI can be configured where the business decides it is appropriate.

Book a call

Fifteen minutes with a certified AI professional. We reply within one business day.
